

## **Method and Apparatus for Scheduling Communication Services**

### **Abstract of the Disclosure**

Communication services are scheduled for mobile stations (116, 118) within a communication network (100) based upon characteristics of communication links (122, 124) associated with each of the mobile stations (116, 118). A group of mobile stations is formed based upon the respective characteristics, and communication services are scheduled for the group.
